

Business Intelligence Solution for **HEALTHCARE**

Current Business Challenges

Healthcare organizations are under increasing pressure to improve performance and the quality of care they provide. The challenges in the healthcare industry has always been in the following areas

- Increase service quality
- Improve patient satisfaction
- Increase revenues and reduce costs
- Enhance capital investment decisions
- Schedule staff efficiently
- Support quality accreditation and comply with new regulations

Enterprise Cube BI solution

Our Knowledge Driven Health vision demonstrates how we are taking a holistic approach to health. EC BI software enables people at all levels of your healthcare organization to make financial, operational, and clinical decisions that support your overall organizational goals.

Using familiar, intuitive Microsoft applications, every employee—not just trained specialists—can easily access relevant, actionable information, create reports and dashboards, monitor key performance indicators (KPIs), collaborate with peers and colleagues, and make well-informed decisions. Plus, you can rely on proven technology from Microsoft to assure your solution is easy to manage and support.

Enterprise Cube Implementation Timelines

Any BI Solution will take a multitude of years to come to life and start being useful. **Enterprise Cube** starter kit eliminates this. With a matured data model and predefined analytics, what the starter kit misses is the data of the Insurance organization. Bring data and see **Enterprise Cube** come to life. Start seeing your BI Solution become a reality in months than years.
